DETAILED ACTION

Response to Arguments

The examiner is withdrawing the finality of the previous office action on grounds of newly found prior art. A non-final rejection of the claims is presented in the enclosed office action.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1-3,5,7 is rejected under 35 U.S.C. 102(b) as being anticipated by Eda [5,387,888].

Regarding claims 1,7,13, Eda discloses a high frequency ceramic multiplayer substrate. Eda discloses a flexible board comprising of an internal layer comprising of a line formed in a first area of the said internal layer (1, 2, 2' in Fig.1), a first ground layer formed on the upper surface of the said internal layer (3 in Fig.1) and a second ground layer formed on a lower surface of said internal layer (4 in Fig.1) and the ground layers disallowing the radiation to pass through (See summary of invention and column 1, lines 28-38, column 9, lines 59-63).

Regarding claims 2,8,14 Eda as treated in claim 1 discloses a high frequency multi-layer substrate such as used in cellular telephones comprising of 2 ground electrodes, one on the top and the other at the bottom of the dielectric layer and hence is inherent that the top cover for the electronic device is formed over the first ground layer on top and the bottom cover is formed over the second ground layer at the bottom.

Art Unit: 2681

Regarding claim 3,9,15 it is inherent for the flexible board formed by the multi-layer substrate to use adhesive layers between the various layers in order to hold the multi-layer substrate together.

Regarding claims 5,11,17 Eda discloses via holes connecting the ground layers with the internal layer thus connecting the first ground layer and the second ground layer (See summary of invention).

Allowable Subject Matter

3. Claims 4,6,10,12,16 and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reason for the indication of allowable subject matter:

5. Prior art fails to disclose a ground line formed in a second area except said first area in said internal layer and wherein plurality of through holes is formed throughout said first ground layer, said ground line and said second ground layer, said through holes electrically connecting said first ground layer, said ground line and said second ground layer to one another.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tonegawa [US 6,252,778] discloses a complex electronic component.

Onishi [US 5,459,368] discloses a surface acoustic wave device mounted module.

Yoshikawa [US 5,796,165] discloses a high-frequency integrated circuit device having a multi-layer structure.
